

## Appendix A - Form of Service Order

By this service order (the “**Order**”), Via Mobility LLC, a Delaware company with its principal office located at 10 Crosby Street, Floor 2, New York, New York 10013 (“**Via**”), and the customer identified below (“**Customer**” or “**participating agency**”) agree to collaborate towards the operation by Customer of on-demand transit deployment (the “**Deployment**”) in Cincinnati. Terms used but not defined herein shall have the meanings assigned them in the Master Terms and Conditions for the Via Solution and Support Services Agreement (the “**Agreement**”) entered into between Via and NEORide.

Customer Name: Southwest Ohio Regional Transit Authority (“the participating agency”)  
Customer Notice Address: 525 Vine Street, Suite 500, Cincinnati, OH 45202  
Customer Email: kshammout@go-metro.com

**Term:** The duration of the Pilot shall last until the last day of the calendar month during which a period of 9 months following launch expires. The contract is subject to extension for an additional four years by mutual agreement of the parties on terms to be agreed (including any increase in monthly fees for additional months) in accordance with Section 5.1 of the Agreement.

**Customer Data:** As between Customer and Via, all IPR in and to Customer Data is owned solely by Customer. For the avoidance of doubt, Via may, and is hereby granted the right to, access, modify, and use the Customer Data, including for purposes of performing Via’s obligations under this Agreement and/or to improve its product and services offerings, including Customer’s services.

NEORide entered into the Agreement on behalf of the participating agency identified above. The rights and benefits of NEORide that are identified in the Agreement are hereby passed through to the participating agency by execution of this Order. The participating agency will receive access to the standard Via Solution and automatic software updates, which will include the following:

- Fully localized proprietary routing and matching algorithms that analyze all trip requests, assign riders dynamically to the best-suited vehicle, and group passengers headed in the same direction into efficient shared rides powered by Via’s patented technology;
- Downloadable iOS and Android rider apps, and web booking portal, that allow customers to book microtransit rides, track vehicles in real time, pay for trips, and troubleshoot any issues. The application shall allow customers to save favorite pick-up and drop-off locations (e.g. recurring locations such as grocery stores, work, hospitals for said customer) for easier future trip planning on the web booking portal and the mobile app.
- The participating agency will receive a white-labeled Rider App (which will be available for free download in both the iOS and Android app stores) that meets the agency’s desired look, feel, and functionality for its services.
- Downloadable driver app that provides efficient turn-by-turn directions; the app allows drivers to start and end driving time, seamlessly pick up and drop off riders, and take breaks. Drivers may switch a rider’s payment method in the app, but they cannot indicate

partial or non-payment. The app also supports communication with Dispatchers via free format text messages. The participating agency may install and manage their own MDM software to prevent use of the app while the vehicle is in motion if they so choose.

- Access to the Via Operations Console (“VOC”), which allows the partnering agency and the EZConnect Mobility Center to perform a variety of functions, including booking trips, checking trip details, adjusting rider account information, providing customer support, and accessing reports. When entering rider account data, the system will alert the user if there is an existing customer account entry with the combination of the same name, email and phone number. The VOC allows booking of round trips if requested by a customer. If a customer wants to book a trip with multiple legs, this is possible, but the legs may not be connected in the system. Funding source and billing code functionality will be scoped with the participating agency and Via will provide the option for the participating agency to add codes to riders’ accounts to give them special pricing, or to self-identify as a concessionary type in the rider app. Via shall provide the participating agency with training on their mapping tools, including editing of stop points and road closures. The participating agency will request Via support team for assistance with zone or POI editing. For every user, the participating agency and the Via project team will establish user permission levels that will grant access to the appropriate set of information and system components.
- Outbound IVR functionality through our in-house IVR solution, based on Via’s existing integration with Twilio will be available to the participating agency. This solution enables automated phone calls and SMS reminders/updates regarding upcoming trips, including booking confirmations and notifications of driver lateness or reassignments. Such calls and notifications will be configured for the participating agency. The solution also enables ad hoc phone calls and SMS to/from the Operations Center for staff to communicate with riders/drivers but does not facilitate web chat. While riders are always able to leverage the web or mobile application to book rides, view ride statuses/ETAs or cancel rides at all times, inbound IVR features are not yet available in Via and will be available by the end of 2023 to the participating agency.
- “Deep link” integration with Masabi. This integration will allow riders to select “EZfare” as their payment method in the Rider App. They will then go to the EZfare app to buy their ticket independently (Via can facilitate this step through a link or pop-up in the Rider app to direct riders). Riders will then scan their ticket purchased in the EZFare app or display it to the driver. They will also maintain the ability to pay with alternative payment methods, such as a credit card.”  
Deep link integration with Transit App where riders are able to search for and plan Via microtransit trips in Transit App, and receive information on payment and wait times. Once they are ready to request a Via trip, they are automatically redirected to the Via Rider App to finish the trip request.
- Access to the data reporting set below in Exhibit 1 will be made available via the VOC. To protect Via’s intellectual property and the privacy of riders, Via will provide the following data tables and dashboards in the form of aggregated reports and data tables to Customer through VOC:
  - Service KPI Dashboards: Visualized dashboards and graphs of Key Performance Indicators. These dashboards provide a high-level view of the overall service

performance across a number of metrics and periods of time. Dashboards are available for download as .jpeg files or in raw form as excel spreadsheets.

- Data Generator: Set of tables with granular raw data about the service that are available for download as excel or csv spreadsheets.

The reports will be refreshed daily. The reports are aggregated and any information about individual riders is de-identified. Additional off-the-shelf reporting may be made available to the participating agency upon request at Via's discretion. Custom reports will need to be scoped and may come at additional cost.

### **Optional Features (no additional cost):**

- On-demand planning workshop with Remix: Complimentary on-demand planning workshop using Remix On-Demand Planning tool. NEORide and the participating agency can holistically model, analyze and understand the benefits and tradeoffs between different configurations of fixed-route service and on-demand microtransit to develop the optimal combined network.
- Integrated multimodal trip planning: Through integration with public GTFS feeds, Via's rider-facing mobile application can display real-time schedule information about other available transit modes in the region. Via can configure our platform so that riders in the participating agency can view live bus or train schedules and book on-demand trips to any fixed-route services.
- Via Media Solutions: A proprietary and modular transit advertising service that will seamlessly integrate with the NEORide and the participating agency services. VMS can unlock an additional source of non-fare revenue by enabling partnerships with local businesses through a range of innovative offerings, at no additional cost.
- Trip Brokering: Via is currently in the process of building and refining the functionality and ability to seamlessly broker trips to Uber and other TNCs/third-party transportation providers. We anticipate this feature to be available for NEORide and the participating agency by the end of 2023. The cost of implementing this feature for the participating agency is included in the proposed budget. Any trips brokered to Uber would have their own fare structure and internal costs for the participating agency

### **Support Services – Installation:**

The participating agency will be launching a microtransit service For the participating agency, Via will provide installation support consisting of 6 stages.

#### **Stage 1: Initial System Assessment**

- Host kickoff meeting to confirm goals and conduct needs assessment.
- Analyze existing on-demand service in the area in detail and surrounding fixed-route transit options.
- Gather inputs on existing on-demand services and goals
- Explore different service designs in the region to validate the appropriate service zones
- Provide API documentation to relevant trip planning applications
- Develop baseline requirements traceability matrix RTM for tracking and deliver PMP

#### Stage 2: Service Planning and Design

- Confirm technical and any unique product requirements
- Align on performance goals, service quality targets, and reporting requirements
- Finalize service design (including parameters and zone)

#### Stage 3: System Development and Internal Testing

- Localize the Via platform, including the routing and aggregation algorithms and internal mapping system, to the service area
- Localize front-end environment as well as system messages, emails, and other branded communications
- Configure Rider App, Driver App, Admin tools, and data dashboards
- Begin quality assurance testing
- Via to make all reasonable efforts to facilitate and test EZfare payment integration in partnership with NEORide and Masabi. All parties are responsible for the success of this integration.

#### Stage 4: Testing and Training

- Perform a broad spectrum of functional tests using a fully localized simulation environment. Via will test global updates prior to implementation in a live environment. The participating agency will be able to test any features launched prior to implementation or in a permissioned beta role before wider distribution. While Via team will use internal testing environments, the participating agency will only receive access to their live production environment.
- Via's internal testing reports contain proprietary information and as such shall not be shared with NEORide. Via is happy to provide testing status updates as well as further insight into the robust testing and QA process.
- Conduct quality assurance internal field tests in zone with real drivers and riders
- Install Via's Driver App on in-vehicle tablets, and test with drivers in vehicles
- Conduct training workshops for drivers and administrators/dispatchers and call center employees
- Successful end to end test with payment method
- Support pre-launch marketing activities

#### Stage 5: Operational Preparation

- Ensure the system experience aligns with the agency's vision
- Finalize any adjustments to service design resulting from functional and internal tests

#### Stage 6: Service Launch and Optimization

- Provide hands-on support to ensure a successful launch
- Collaborate on optimal shift plan
- Gather feedback from initial users and make adjustments as needed

**Support Services – Ongoing:** The following services are included for the participating agency in the fees up to the number of hours per month identified below:

- Operational support and system adjustments: Includes algorithm adjustments and changes to virtual bus stops / pickup points at request of Customer: up to 10 hours per month
- Expert consulting: up to 5 hours per month
  - Marketing and growth: help setting up complex promotions, review and assistance for third party tools that can integrate into Via's tech
  - Operations: Including supply optimization analysis, payment & fraud investigation, and business case/unit economics analysis
  - Service expansion: Including feasibility analysis for service expansions or additional projects
- Tech Support: Dedicated customer success Via point of contact will use commercially reasonable efforts to respond within one business day for non-critical issues (upon receipt of a detailed description of the issue as requested by Via) and to ensure that assistance is provided within a reasonable time frame. Via will also provide NEORide and the participating agency with an appropriate channel for alerting Via to system outages or other critical issues, with respect to which Via will provide emergency assistance.

Via will notify Customer if Customer is within 1 hour of exceeding capped hourly limit on Operational Support and System Adjustments and/or Consulting Services. If requested, hours beyond those set forth above will be charged on an hourly rate, ranging from \$165-\$225.

### **Customer Responsibilities:**

**General:** NEORide and the participating agency will operate and manage the Deployment as set forth in the Agreement. NEORide and the participating agency shall cooperate with Via as reasonably necessary for the purpose of setting up the Deployment and its specifications, including by providing prompt feedback to Via's inquiries and providing local insights, in order to meet mutually agreed upon deadlines.

**Launch:** *Within one week of signing a service order, NEORide, the participating agency, and Via will mutually agree on the exact geographic zone including the precise zone boundaries and a targeted launch date ("Launch"). If the Launch date is moved greater than two weeks at the participating agency's request or delayed due to the participating agency's inaction, NEORide will be charged \$1000 per change, up to 2 changes, to accommodate hosting and other direct IT costs, and then NEORide will charge the foregoing fees to the participating agency. Should the participating agency move the launch date 3 times or more, NEORide will be charged \$1000/month until the launch of the service, and then NEORide will charge the foregoing fees to the participating agency. The participating agency shall make all reasonable efforts to launch the service by the targeted launch date.*

**Zone:** NEORide, the participating agency, and Via will agree within two weeks after project kickoff on the Deployment service zone. Any changes or expansions to the zone may result in additional fees.

**Support Requests:** At the start of the project, Via will direct NEORide and the participating agency towards the relevant CRM tools to log requests. In order to trigger a Product

Maintenance request, requests for product maintenance must contain detailed information about the nature of the request.

**Additional Feature Requests:** Requests for additional features may be subject to additional fees.

**Payment Processing:** The fees set forth above do not include any owed to the third-party payment processor (Braintree). Via will facilitate an introduction to its recommended payment processor and Customer is responsible for entering an agreement with such payment processor in order to be able to process credit card payments.

**Uniform Parameters:**

As a NEORide agency, the participating agency agrees to the NEORide uniform parameters outlined below. Should these parameters need to change, the participating agency shall work with NEORide and other participating agencies to align on the new parameter.

| <b>Category</b>      | <b>Parameter</b>                                                                                                                                   |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| Rider account fields | Riders will sign up with their name, phone number and email address. These fields are required as the minimum (no guest profiles will be allowed). |
| Payment methods      | Available payment methods and naming conventions will be uniform across agencies.                                                                  |

### Southwest Ohio Regional Transit Authority Service Details:

The participating agency will have the opportunity to expand and adjust the scope of work set forth in this Order as needed. Exact parameters of the service will be agreed upon during the scoping and launch process. Adjustments or additions to the scope above may have timing and pricing implications that will be captured here.

Service specifics include:

This Order shall be governed by the terms and conditions set forth in the Agreement. By signing below, the parties agree to the terms contained in the Agreement.
